

## CONTACTS

### WHAT IS SPIR?

The Strategic Partnership for Industrial Resurgence (SPIR) was established in 1994 by New York State to utilize the extensive engineering resources of the state university system to help local industry compete more effectively.

SPIR fills a critical gap in existing state industrial assistance programs by providing technically advanced multidisciplinary assistance on a fast turn around basis.

SPIR helps companies improve their market posture, retain existing employees and create new jobs.

# WHAT CAN SPIR DO FOR YOU?

In today's rapidly changing business environment it's essential that businesses stay current with technological advances. Keeping pace with these developments, though, can be difficult and costly. That's where SPIR can help.

By leveraging the resources in the engineering programs of the State University of New York (SUNY), SPIR assists in the revitalization and redirection of New York industry.

Whether you're a small firm looking to streamline your manufacturing processes, a large high-tech company seeking to expand your international horizons, or a company exploring ways to adapt to new environmental regulations, SPIR's goal is to help you to make your business more competitive.

The success of the SPIR program is built on the relationship between academic engineers and industry.

SPIR provides local industries with:

- The expertise of more than 250 engineers and applied scientists.
- Experience with more than 410 companies in New York State.
- Access to top engineering and applied science students.
- Access to advanced manufacturing and high-technology facilities.
- A host of other resources to help your business become more competitive.

We have helped more than 410 NY companies. See how we can help you!
